

SUSTAINABLE AVIATION FUEL

A safe & affordable way to reduce your impact on the environment.
Now available at Sun Air Jets in Ventura County.

CLEAN SUBSTITUTE

Sustainable aviation fuel (SAF) is a clean substitute for conventional jet fuel. Rather than refined from petroleum, SAF is made from organic & renewable materials and can reduce carbon dioxide emissions by approximately 23%.

SAFE FOR ALL JET AIRCRAFT

Sustainable aviation fuel has been tested and approved by manufacturers of aircraft, engines and components to assure their reliability and safety.

READY TO USE

Equally important, SAF can be blended with current fuels, so manufacturers do not have to redesign engines or aircraft - the fuels can simply be “dropped-in” whenever they are available.

AFFORDABLE

SAF is currently offered at the same rate as conventional jet fuel at the Sun Air Jets' FBO in Ventura County. Requesting SAF instead of conventional fuel is an affordable & safe way to reduce your impact on the environment.
